Introduction

Hartford, Connecticut has a population of 1,010,000. I love living in Hartford. There's so much to do, so much to see, and so much to experience. Being born and raised in Hartford is the best thing that has ever happened to me. A lot of people in Hartford are very kind and respectful. Although, some people don't take good care of our streets, roads or parks and then the areas get covered in trash. What I would like to change for Hartford Connecticut is how we can help the environment and streets of Hartford by getting rid of trash on the ground.

What we can do to help the streets

We can solve people littering by getting more trash cans in the town. No matter where you are, you should always have a place to throw away your unwanted belongings. Instead of littering and the trash getting all over the town we should install more trash cans.

Once we find a way to clean up the roads and get rid of trash, we can most likely get a bigger population by 2023. People in Hartford can also participate. Whenever we see trash on the road or even on the sidewalk, we should pick it up. Not only does it benefit our well being it helps the wildlife.

How can we protect the sealife

One other thing we should help fix in our town, is if we keep track of if the water is dirty or clean. Animals need a clean environment and it is our job to make sure they have a clean and healthy environment.

Over 100,000,000 sea animals die from the act of plastic being thrown, blown, or being exposed to the sea. Those poor animals risk their lives just because they thought they were going to get something like food out of the plastic bags.

Ways we can help sea animals is by; making sure everything that is recyclable such as plastic rings, plastic bags and much more. In order to grow publicity we should at least have a way to keep even the water clean enough for the animals to live.
How we can prevent home fires

Another thing that we could use is more fire prevention items. We should all find a way to remind people to turn off the stove or not to have it high enough that it can start a fire. 346,800 home fires start a year. Could you imagine how many homes for people and animals have been ruined?

People of Hartford should all find a way to put a stop to fires. Whether it is caused by immaturity or mistake, there should be no way a person or animal has to go through that. Fires can’t stop on their own and it is time that we step up to try harder to prevent fires.
